

Asian Tiger Mosquito Alert

Washington Borough

Asian Tiger Mosquitoes were found in Washington Borough on July 13, 2017. The Asian Tiger Mosquito, *Aedes albopictus*, is an invasive species of mosquito and is an aggressive daytime biter. Asian Tiger Mosquitoes are capable of transmitting several mosquito-borne diseases. This mosquito lays its eggs and develops in small containers that are holding water. Please urge residents to dump and drain water from containers in their yards. Tires, planters, saucers, tarps, buckets, and bird baths should all be dumped at least once a week.

The Warren County Mosquito Control Commission has increased their surveillance in the area to determine the extent of the infestation and is planning on performing adult mosquito treatments by ultra-low volume spraying with a truck mounted sprayer in response. Initial treatments are planned for July 20, 2017 from 8:30 pm – 11:30 pm in the following areas:

Washington Borough - Cattelle Court, N. Jackson Ave, Jackson Ave., E. Stewart, Taylor St., Cleaveland St., E. Warren, S. Wanderling, Belvidere Ave., West Warren, and Cherry St..

Please visit the Commission's website www.warrencountymosquito.org for daily treatment schedules and more information about mosquitoes.
